Summary

Full Stack Engineer with 4+ years of experience building distributed systems, data pipelines, and integration-heavy products using Python, Node.js, and PostgreSQL. Experienced in designing asynchronous, multi-tenant systems with a focus on data modeling, backend architecture, and enterprise automation.

Skills

- **Languages:** Python, JavaScript, TypeScript, C++
 - **Backend & Cloud:** Node.js, PostgreSQL (Graph Data Modeling), MongoDB, RabbitMQ, AWS.
 - **Architecture:** ETL Pipelines, Multi-tenant Systems, API Rate Limiting, Distributed Systems
-

Experience

Scrut Automation | *Software Development Engineer (Full Stack)* | Remote | Mar 2024 – Present

Distributed Data Platform (*datasync-slave*):

- Architected a foundational data synchronization platform powering 5+ core GRC modules and 40+ third-party integrations, using queue-driven ETL and dependency-graph execution for asynchronous data processing.
- Designed a multi-tenant PostgreSQL data model using entity/relationship tables to support deep-hierarchy traversal and reusable cross-product data synchronization.

Automated User Access Review:

- Engineered infrastructure for centralized cross-application identity management and automated periodic access certification, replacing spreadsheet-based workflows with real-time API synchronization and one-click verification.
- Built audit-ready reporting workflows aligned with SOC 2/ISO 27001 requirements, contributing to enterprise contracts worth \$100K+.

Risk-Based Vulnerability Management:

- Designed a vulnerability aggregation pipeline integrating AWS Inspector, Snyk, and GitHub Dependabot, normalizing heterogeneous security data into a unified vulnerability model.
 - Implemented automated risk scoring and remediation-SLA tracking to prioritize critical CVEs across customer environments.
-

PropReturns | *Founding Full Stack Engineer* | Jun 2022 – March 2024

Process Automation:

- Built a bidirectional synchronization pipeline between Google Sheets and MongoDB using Python/gspread, automating property ingestion workflows and reducing upload time by **90%**.
 - Designed and implemented RBAC using Node.js and OAuth 2.0, enforcing granular access controls across sensitive financial data.
-

Projects

[Land Axis](#) | *Supabase, Python, Flask, React* | Dec 2025

- Architected a full-stack platform aggregating and visualizing land ownership and distribution data using React, Python, Flask, PostgreSQL/Supabase.
 - Developing an AI agent layer capable of decomposing natural-language land queries into retrieval, document-analysis, and geospatial tools with source-backed responses.
-

Education

B.Tech, Computer Science (7.86/10) | Indian Institute of Information Technology, Nagpur | 2018 – 2022
